CONTENTS OF VOLUME 172

NUMBER 1, JULY 1988

Review. Antibodies for Phosphotyrosine: Analytical and Preparative Tool for Tyrosyl-Phosphorylated Proteins	<i>Jean Yin Jen Wang</i>	1
High-Resolution Two-Dimensional Electrophoresis of Plant Proteins	<i>Peter J. Holloway and Penny H. Arundel</i>	8
Assay of Inorganic Sulfate in Biologic Fluids by Nonsuppressed (Single-Column) Ion Chromatography	<i>Marilyn E. Morris and Gerhard Levy</i>	16
Conjugation of Metallothionein to a Murine Monoclonal Antibody	<i>Beverly A. Brown, Cynthia A. Drozynski, Cynthia B. Dearborn, Richard A. Hadjian, Frederick A. Liberatore, Thomas H. Tulip, Glen L. Tolman, and Stephen B. Haber</i>	22
A Blotting Procedure Which Preserves Specific Protein-DNA Interactions	<i>Irene Wendler and Ulrich Grossbach</i>	29
Zinc-Binding Proteins Detected by Protein Blotting	<i>Alice Mazen, Gérard Gradwohl, and Gilbert de Murcia</i>	39
Bulk Isolation of the 20,000-Da Light Chain of Smooth Muscle Myosin: Separation of the Unphosphorylated and Phosphorylated Species	<i>Apolinary Sobieszek</i>	43
Analysis of Liver Aldehyde Dehydrogenase Isoenzymes Using High-Performance (Pressure) Liquid Chromatography	<i>Charles G. Sanny and Kimberlee Rymas</i>	51
Conversion of Woodward's Reagent K in an Aqueous Medium: Mathematical Analysis Applied to Enzyme Modification	<i>A. N. Kuimov and G. A. Kochetov</i>	56
Mechanism of Fluorescence Concentration Quenching of Carboxyfluorescein in Liposomes: Energy Transfer to Nonfluorescent Dimers	<i>Raymond F. Chen and Jay R. Knutson</i>	61
Fluorometric Analysis of DNA in Cell Cultures	<i>K. Janakidevi, C. D. Murray, C. Sell, and P. Held</i>	78
Preparation and Quantification of 3'-Phosphoadenosine 5'-Phospho[³⁵ S]sulfate with High Specific Activity	<i>Froylan Vargas</i>	82
Immobilization of Linamarase and Its Use in the Determination of Bound Cyanide in Cassava Using Flow Injection Analysis	<i>D. Narinesingh, D. Jaipersad, and I. Chang-Yen</i>	89
A Radiochemical Microassay for Aspartate Aminotransferase Activity in the Nervous System	<i>D. Garrison, J. Beattie, and M. A. A. Namboodiri</i>	96
Preparation of Colloidal Gold for Staining Proteins Electrotransferred onto Nitrocellulose Membranes	<i>Keiko Yamaguchi and Hideo Asakawa</i>	104
Isolation of Soybean Trypsin Inhibitors by Affinity Chromatography on Anhydrotrypsin-Sepharose 4B	<i>A. Pusztai, G. Grant, J. C. Stewart, and W. B. Watt</i>	108
Sedimentation Field Flow Fractionation of Mitochondrial and Microsomal Membranes from Corn Roots	<i>Samuel M. Mozersky, Karin D. Caldwell, Susan B. Jones, Beverly E. Maleeff, and Robert A. Barford</i>	113
Trans-elution: A Method for the Purification of Components of Complex Biological Extracts	<i>Jacques Thelu</i>	124
Identification of Disulfide-Containing Peptides by Performic Acid Oxidation and Mass Spectrometry	<i>Yiping Sun and David L. Smith</i>	130
Electrotransfer of Proteins after Isoelectric Focusing (with or without Urea) on Fabric-Reinforced, Immobilized pH Gradient Gels	<i>Martin Knierim, Joachim Buchholz, and Werner Pflug</i>	139
Enhancement of Luminol-Based Immunodot and Western Blotting Assays by Iodophenol	<i>Merlin M. L. Leong and Glyn R. Fox</i>	145

Iron Absorption in Man Calculated from Erythrocyte Incorporation of the Stable Isotope Iron-54 Determined by Fast Atom Bombardment Mass Spectrometry	151
<i>Wolf D. Lehmann, Roland Fischer, and Hellmuth C. Heinrich</i>	
A Competitive Enzyme-Linked Ligand Sorbent Assay (ELLSA) for Quantitation of Folates	160
<i>Steen Ingemann Hansen and Jan Holm</i>	
Development of an Automated Lowry Protein Assay for the Cobas-Bio Centrifugal Analyzer	165
<i>P. M. Clifton, L. Chang, and A. M. Mackinnon</i>	
<i>In Vivo</i> Measurement of Dihydrofolate Reductase and Its Inhibition by Antifolates	169
<i>Seaton W. Bowers and David S. Duch</i>	
A New Chromogenic Substrate for Assay and Detection of α -Amylase	176
<i>Peter Biely, Danica Mislovičová, Oskar Markovič, and Vladimír Kaláč</i>	
Haplotype Analysis of the Human β -Globin Gene Complex Using Multiple Locus Specific Oligonucleotide Probes	180
<i>G. Nozari, S. Rahbar, and R. Bruce Wallace</i>	
Use of Enzyme Label for Quantitative Evaluation of Liposome Adhesion on Cell Surface: Studies with J774 Macrophage Monolayers	185
<i>Vladimir S. Trubetskoy, Elena V. Dormeneva, Vladimir P. Tsubulsky, Vadim S. Repin, and Vladimir P. Torchilin</i>	
Use of Platinum as a Modifier in the Sensitive Detection of Tellurium in Biological Samples	190
<i>Z. H. Siddik and R. A. Newman</i>	
Circular Dichroism for the Determination of Amphotericin B Binding to Liposomes	197
<i>Soizic Jullien, Aline Vertut-Croquin, Janina Brajtburg, and Jacques Bolard</i>	
A Plasma Membrane-Enriched Preparation from Giant Barnacle Muscle Fibers	203
<i>Anibal A. Altamirano, Susan L. Hamilton, and John M. Russell</i>	
Identification of Zinc-Binding Sites of Proteins: Zinc Binds to the Amino-Terminal Region of Tubulin	210
<i>L. Serrano, J. E. Dominguez, and J. Avila</i>	
Protein Microinjection by Protease Permeabilization of Fibroblasts	219
<i>Rosemary Lemons, Susan Forster, and Jess Thoene</i>	
Supercritical Fluid Chromatography of Glycosphingolipids	228
<i>J. Kuei, G. R. Her, and V. N. Reinhold</i>	
Development of an HPLC Assay for the Analysis of Tetrafluoroputrescine—A Putrescine Analog	235
<i>Amale A. Hawi, Helen Yip, Teresa S. Sullivan, and George A. Digenis</i>	
Analysis of γ -Carboxyglutamic Acid by Reverse Phase HPLC of Its Phenylthiocarbamyl Derivative	241
<i>David M. Smalley and Peter C. Preusch</i>	
Purification of an Endopeptidase from Bovine Adrenal Medulla Granules Which Cleaves <i>in Vitro</i> at Paired but Not at Single Basic Residues	248
<i>Gérard E. Maret and Jean-Luc Fauchère</i>	
Removal of Dodecyl Sulfate from Protein Solution	259
<i>Haruo Suzuki and Tomohiko Terada</i>	
Use of Tandem Mass Spectrometry (MS-MS) for Aldosterone Assay at the Nanogram Level in Complex Biological Mixtures	264
<i>Danielle Prome, Antoinette Viger, and Andrée Marquet</i>	
Covalent Attachment of an Arg-Gly-Asp Sequence Peptide to Derivatizable Polyacrylamide Surfaces: Support of Fibroblast Adhesion and Long-Term Growth	270
<i>Brian K. Brandley and Ronald L. Schnaar</i>	
A Procedure for the Small-Scale Isolation of Plant RNA Suitable for RNA Blot Analysis	279
<i>Gregory J. Wadsworth, Margaret G. Redinbaugh, and John G. Scandalios</i>	
A Sensitive Microplate Assay for the Detection of Proteolytic Enzymes Using Radiolabeled Gelatin	284
<i>B. D. Robertson, G. E. Kwan-Lim, and R. M. Maizels</i>

Miroław Kozłowski and Włodzimierz Zagórski 382
- Preparation of Reproducible Alkaline Phosphatase-Antibody Conjugates for Enzyme Immunoassay Using a Heterobifunctional Linking Agent
Antoinette Jeanson, Jean-Michel Cloes, Mireille Bouchet, and Bernard Rentier 392
- Spin-Label Assay for Phospholipase A_2
Ching-San Lai, Jian-Zhong Zhang, and Joy Joseph 397
- Rapid Fluorescence Assay of Glucose and Neutral Solute Transport Using an Entrapped Volume Indicator
Yong Keun Kim, Nicholas P. Illsley, and A. S. Verkman 403

Determination of Iduronic Acid and Glucuronic Acid in Glycosaminoglycans after Stoichiometric Reduction and Depolymerization Using High-Performance Liquid Chromatography and Ultraviolet Detection	
<i>N. K. Karamanos, A. Hjerpe, T. Tsegenidis, B. Engfeldt, and C. A. Antonopoulos</i>	410
A Spectrophotometric Assay for Dissimilatory Nitrite Reductases	
<i>C. L. Hulse, J. M. Tiedje, and B. A. Averill</i>	420
Use of <i>p</i> -Aminobenzamidine to Monitor Activation of Trypsin-like Serine Proteases	
<i>Dougald M. Monroe, G. Bradley Sherrill, and Harold R. Roberts</i>	427
A Total Extract Dot Blot Hybridization Procedure for mRNA Quantitation in Small Samples of Tissues or Cultured Cells	
<i>Andrew Grimes, Harry J. McArdle, and Julian F. B. Mercer</i>	436
Avian Myeloblastosis Virus Reverse Transcriptase Is Easier to Use than the Klenow Fragment of DNA Polymerase I for Labeling the 3'-End of a DNA Fragment	
<i>Fumitaka Oyama, Rie Kikuchi, Akira Omori, and Tsuneko Uchida</i>	444
Separation and Quantification of Muropeptides with High-Performance Liquid Chromatography	
<i>Bernd Glauner</i>	451
An HPLC Procedure for the Analysis of Proteins in Lung Lavage Fluid	
<i>L. R. Gurley, W. D Spall, J. G. Valdez, J. E. London, L. A. Dethloff, and B. E. Lehnert</i>	465
Measurement of Biological Disulfides by Postcolumn Sulfitolysis following Separation by HPLC	
<i>J. C. Crawhall and D. Kalant</i>	479
Quantitative High-Performance Thin-Layer Chromatography of Dansyl Derivatives of Biogenic Amines	
<i>John L. Eaton and Donald E. Mullins</i>	484
Isolation of Monoclonal Antibodies to Phencyclidine from Ascites Fluid by Preparative Isoelectric Focusing in the Rotofor	
<i>N. B. Egen, M. Bliss, M. Mayersohn, S. M. Owens, L. Arnold, and M. Bier</i>	488
Electrochemical Detection for High-Performance Liquid Chromatography of Ketocozazole in Plasma and Saliva	
<i>Douglas W. Hoffman, Kitty Lea Jones-King, C. Lewis Ravaris, and Robert D. Edkins</i>	495
Substance P as a Transglutaminase Substrate: Identification of the Reaction Products by Fast Atom Bombardment Mass Spectrometry	
<i>Raffaele Porta, Carla Esposito, Salvatore Metafora, Pietro Pucci, Antonio Malorni, and Gennaro Marino</i>	499
Mini-chromatofocusing of Plant and Fungal Polyphenoloxidases	
<i>Bob M. Moore and William H. Flurkey</i>	504
A Nondestructive Method for the Measurement of Radioactive $^{14}\text{CO}_2$ in Blood	
<i>F. J. Casado, J. A. Fernández-López, J. M. Argilés, and M. Alemany</i>	509
Radioiodination of Interleukin 2 to High Specific Activities by the Vapor-Phase Chloramine T Method	
<i>John J. Siekierka and Steven DeGudicibus</i>	514
Determination of Serum Kynurenine and Hepatic Tryptophan Dioxygenase Activity by High-Performance Liquid Chromatography	
<i>Earle W. Holmes</i>	518

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell biology and cell, tissue, and organ culture methods that are of general application.
- Membranes and membrane proteins. These methods form a major section of interest.
- Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.
- Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.
- Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that offer a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), the address to which proof should be mailed, and the corresponding author's telephone number and fax or telex number. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in each July issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC-IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be

described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. **Simple histograms should be avoided. A table or a paragraph in the text is preferred.**

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5×7 -in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jackson, G. E. D., and Young, N. M. (1987) *Anal. Biochem.* **162**, 251–256.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Britton, G. (1985) in *Methods in Enzymology* (Law, J. H., and Rilling, H. C., Eds.), Vol. 111, pp. 113–149, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
